

Global system management on a network

Multi-user and multi-site solutions

With the easy-to-use Bosch Control Center, authorized users can view and control cameras from multiple Divar units at the same time. Up to six remote users can view live and stored images simultaneously from each Divar on the network, while normal local operation continues uninterrupted. Divar is fully password-protected to ensure that only authorized users can view and retrieve the recorded video.

For multiple site applications, Divar units connect to each other and to a central station by local area network (LAN), wide area network (WAN) or the Internet. Built-in bandwidth control ensures that streaming video will not overload your network.

The Control Center includes a powerful Configuration Tool. The user-friendly graphical interface allows you to configure any connected Divar from a remote PC, adjusting settings as though you were working at the Divar unit itself. In addition, you can save the Divar configuration settings to the PCs hard disk as backup or to download the configuration to other Divars. For multiple site applications, Divar units connect to each other and to a central station by local area network (LAN), wide area network (WAN) or the Internet. Built-in bandwidth control ensures that streaming video will not overload your network.

Live viewing, recording and playback

System configuration, live viewing and play back may occur locally at the unit or from anywhere on a network. In addition, use Internet Explorer to view a live video feed, play back events, search and control cameras without special permissions or additional software.

Plays well with others

Divar integrates easily with Bosch G Series control panels, one of the most widely used control panels in the industry. In addition, using the software development kit (SDK), Divar integrates with virtually any third-party system or software.

Simple, complete solution

Divar's simple one-box design clearly hides a wealth of powerful capabilities. Whether it's a single building, many sites in several regions or world-wide facilities let Divar help you effectively manage your security challenges for the safety of all. Contact your Bosch Certified Security Dealer for more information or visit www.boschsecurity.com.

The Bosch added value

Bosch is one of the world's foremost developers and innovators of security systems and manufactures its CCTV equipment to the highest standards of quality. In addition, you have the added backing of Bosch's full three-year warranty, free advance replacement program and the support of our worldwide Customer Care and service network.

BOSCH

Divar, the versatile one-box solution

The heart of your security infrastructure

With the Divar Digital Versatile Recorder at the heart of your organization's security infrastructure, you enjoy the benefits of reliable, full-function digital video recording. Divar's simple exterior hides the power, control and flexibility it brings to your environment. Divar is an embedded system so it does not require service pack updates or become infected with computer viruses or worms. Designed and manufactured with Bosch quality, Divar delivers the security coverage you need from a stand-alone system, a multi-camera recording system or a network.

Everything you need ... and more

Divar includes all the essential closed circuit television (CCTV) system elements plus new features that take it from great to outstanding.

- Divar's built-in multiplex switcher monitors 6, 9 or 16 cameras.
- Bilinx gives you control of camera operation over common coaxial cabling, simplifying installation and minor configuration changes.
- Alarm- and motion-activated recording is standard, while smart motion search makes quick work of locating specific events.
- Using Internet Explorer, access the Divar to view live action or playback archived events without special software or tools.
- Archive events locally with an internal or external DVD writer.
- Despite all this powerful functionality, Divar is remarkably easy to use.

Tamper-proof evidence

Divar stores image authentication data together with the images so that they cannot be altered in any way without detection. This critical video and data authentication eliminates concerns about using digital CCTV recordings as evidence in legal procedures. Important recordings can be protected from erasing and overwriting.

The Bilinx advantage

Adding Bilinx to Divar means that functions usually requiring hands-on access to a camera or its wiring now use the video transmission cable to communicate with the camera. This is a significant advantage in installations where cameras are hard to reach or where operations and surveillance might be compromised by a routine service call.

Divar benefits

- Easy video retrieval using advanced search capabilities, including smart motion search.
- View live or archived images using Internet Explorer without special software.
- Configure and control cameras with Bilinx over coax cabling.
- Authenticate images automatically for tamper-proof evidence.
- Integrate easily with ATM/Point-of-sale (POS) equipment.
- Store events using an internal or external DVD writer without a PC.
- Access multiple Divar units remotely with the user-friendly Control Center.
- Expand your CCTV recording system with as many as 256 cameras using Video Manager.

Local expansion flexibility

Build the system to your specifications

Whether you need a stand-alone Divar, a multi-camera recording system or a network of interconnected recorders, Divar expands easily as more functionality is required. In addition to the standard front panel controls, the optional Bosch IntuiKey™ keyboard works with all Divar configurations.

Storing images is quick, easy and cost-effective with Divar. Simplified local archiving on low-cost, high-capacity DVDs or CDs is available using an optional DVD writer. The system may be configured with hard disks of varying sizes to meet virtually any storage requirements you may have. Additionally, Divar connects with external disk arrays such as DVAD and DVAS for expanded storage. However large or small your application, there's a Divar to meet your needs.

A single IntuiKey™ keyboard allows you to control and operate as many as 30 Divar recorders.

For fully centralized control, viewing and recording from up to 256 cameras, a Bosch Video Manager links as many as 16 Divar units. These configurations are ideal for larger applications such as industrial complexes, multi-story buildings, prisons and shopping malls. An ATM/POS interface is also available to capture and track transaction details for banking, retail and other POS applications.

Fit Divar into your existing systems

Divar integrates smoothly into existing installations with conventional analog video matrix systems, such as the Bosch Allegiant® system. These systems offer integrated control and digital video recording for casinos, airports and other large security-critical facilities.
